

Creationists are quoting you, to misrepresent your stance on evolution.

Hi! I'm a student of molecular biology from Rutgers University. I just thought you would want to know that you are being quoted by a fundamentalist christian group to misrepresent your stance on evolution, and to argue for creationism.

"This experiment led Jeffrey H. Schwartz, a professor of anthropology, to conclude that while adaptation may help a species survive under changing circumstances, "it is not creating anything new." "

[Here is the link to the article of which is being published in millions of magazines in an attempt to make a case for creationism.](#)

This is not the first time this religious organization has grossly misrepresented the words and works of other scientists to suit their own deceptive agenda. It is because of this that I thought it best to bring this matter to your attention.

Bests!

Schwartz, Jeffrey H

Thanks. Someone emailed earlier and I've seen it.

This reference is taken out of context from my book Sudden Origins. My argument is a present-day version of non- Darwinians, including Huxley and Mivart: adaptation cannot explain both the origin of novelty and the persistence of novelty – only the latter. But changes in the molecular signaling pathways that underlie development can. So I'm not rejecting Darwin's discussion of adaptation, only putting it in a better explanatory place.

Best JS
